

ANDERS INDSET LAUNCHES 'TOMORROWMENSCH' — A 20-YEAR EXPERIMENT TO UNDERSTAND LIFE, CONSCIOUSNESS, AND WHAT WE ARE BECOMING

The philosopher and deep-tech investor unveils a global ecosystem uniting philosophy, science, and capital — with one question at its core: what does it mean to be a Mensch in an age where technology begins to mirror life itself?

Zürich, Switzerland — Philosopher and Deep-Tech Investor Anders Indset today announced the launch of tomorrowmensch, a company built to explore one of humanity's oldest and most urgent questions: What is life, and what is consciousness — and what we become by building the technologies that seek to replicate them.

tomorrowmensch is not merely an inquiry, but a long-term experiment in becoming — examining how humanity evolves when science fiction collapses into reality.

tomorrowmensch is an experiment to understand the human mind and the nature of being, through technology, science, and philosophy.

"My ambition is to build a Mensch — and to fail," says Indset. "Because if I fail, it means the human being is something more than a machine. That failure would be the greatest discovery of all: proof that consciousness, emotion, and life cannot yet be engineered — only understood and lived."

The Human Intelligence Company

tomorrowmensch AG is an ecosystem for studying, shaping, and investing in the future of human intelligence. A storymaking company that fuses philosophy, science, and capital into one operating system. Through documentaries, books, and cinematic storytelling, tomorrowmensch translates the frontiers of science and philosophy into culture. It captures humanity's attempts to build life, decode consciousness, and rethink what it means to exist at a moment when technological optimisation increasingly shapes civilisation — built on two interconnected pillars:

tomorrowmensch experience — A Global Community of Minds

A network of scientists, philosophers, investors, and artists convening in cities such as Zürich, London, Oslo, and Frankfurt. The Experiences serve as high-signal meeting ground

for those shaping the next chapter of civilization — where ideas, capital, and curiosity meet. In its second phase, tomorrowmensch live will expand to the U.S. and Asia.

tomorrowmensch Experience also hosts leading salons and summits worldwide, including the annual Quantum Economy Reception and the Code of Life Family Office Summit in Davos during the World Economic Forum.

tomorrowmensch Capital – Enabling Europe’s Technological Future

Through its investment ecosystem, tomorrowmensch creates, backs, and acquires exceptional ventures built by extraordinary founders. With unique access to Europe’s frontier technologies, tomorrowmensch focuses on early-stage ventures at the edge of biology, intelligence, and infrastructure — from AI and neurotechnology to quantum and longevity science.

Our work focuses on the convergence of four domains that will define the next chapter of human progress: life, infrastructure, intelligence, and energy. Not as isolated sectors, but as deeply interconnected systems shaping how we understand and build the future.

Every investment reflects a clear conviction: technological progress must not allow externalised optimisation to replace human becoming. Each venture is a step toward building systems that amplify life rather than reduce it to performance.

Understanding Life Through Creation – A New Era of Inquiry

tomorrowmensch’s mission extends beyond business. It aims to build a bridge between the philosophical and the practical, between thought and creation. It is grounded in Indset’s experience and publications, including *The Singularity Paradox*, co-authored with Dr. Florian Neukart. *“tomorrowmensch is the space where technology and philosophy finally meet,”* Indset explains. *“We call it Sci-Phi – Science-Philosophy – a framework for agency in an age where science fiction has become reality.”*

Where Philosophy Builds Technology – A European Vision for the Future of Humanity

Based in Switzerland, tomorrowmensch positions Europe as the intellectual and ethical home of the next human evolution. Its mission is to unite capital, science, and storytelling to ensure that technological progress amplifies, rather than replaces, life.

“We are not building machines,” Indset concludes. *“We are building understanding — and taking responsibility for what we become by building them.”*

About tomorrowmensch®

tomorrowmensch is a capital and experience platform exploring the future of human intelligence and becoming. It unites thinkers, scientists, and investors around the central mission of understanding life and consciousness in an age of exponential technology.

Headquartered in Switzerland with a global network, tomorrowmensch operates as an evolving experiment in the co-creation of humanity's next chapter.

About Anders Indset

Anders Indset is a Norwegian-born philosopher, author, and business philosopher operating at the intersection of technology, capital, and human becoming. Indset has delivered more than 1,200 keynotes worldwide and authored seven books, including *The Quantum Economy* and *The Singularity Paradox*, and works closely with founders, investors, and institutions navigating the implications of exponential technologies.

As founder of tomorrowmensch, Indset explores philosophical questions not as abstractions, but as realities tested through companies, technologies, and capital — examining what it means to become human in an age where machines increasingly mirror life.
